

00-README

WhatsApp Business AI — knowledge base document stack

This folder is a ready-to-upload document stack for training an AI assistant that answers customers on WhatsApp Business, built from Wings Global Trade's real business rules and — as of this revision — a real transcript export of the actual human-staffed WhatsApp sales line. It is not generic filler: every category, discovery question, and escalation rule here is either sourced from the live codebase (Mister's guardrails, the lane registry, the published /proceso page) or from real proven conversation patterns.

PDF versions

WhatsApp-facing upload tools in this deployment accept PDF only. Every file below has a matching PDF in pdf/ (same number prefix, same filename minus .md/.csv). The .md/.csv sources stay in git as the source of truth — regenerate the PDFs from them (see "Regenerating the PDFs" below) rather than hand-editing a PDF directly.

An important correction from the real transcript

Earlier drafts of this stack ported Mister's site-widget rule — "never state a price, ever" — onto this WhatsApp line as if it were the same product. It isn't. Mister is a public, unmanned chat widget with a structural hold-back guardrail; this WhatsApp line is a **human-assisted sales channel**, and the real transcripts in 08-ejemplos-reales.md show the team routinely discusses budget and does send real quotes over WhatsApp — always *after* a discovery step, never in the first message. 04-reglas-y-escalamiento.md and 03-faq.md now reflect that distinction. Get this wrong in either direction and the assistant either stonewalls a buyer who expects a normal sales conversation, or invents a number nobody confirmed — both are real failure modes, not a formality.

File stack

- 1 01-empresa-overview.md — who Wings is, markets, the wholesale-only rule.
- 2 02-lineas-y-categorias.md — lane status, plus the categories confirmed by real WhatsApp traffic (vehicles, minibuses, motorcycles, dealer/volume tier) that predate the lane framework.
- 3 03-faq.md — buyer-facing Q&A pairs, corrected against real transcripts (single-unit vehicle purchases are normal; pricing is discovery-gated, not banned).
- 4 04-reglas-y-escalamiento.md — hard rules (no fabricated numbers, no legal overreach) and when to actually hand off to a human, revised to match observed real behavior instead of Mister's stricter site-widget rule.
- 5 05-interiores-azulejos.md — the Interiores lane's product knowledge (WGT/02), unit math and vocabulary.

- 6 06-proceso-de-importacion.md — the import process end to end, sourced from the live /proceso page, with a caveat on published timeline ranges vs. personalized delivery promises.
- 7 07-guion-de-descubrimiento.md — the actual discovery-question playbook per product category (vehicles, minibuses, tractors, motorcycles, dealer escalation), extracted from real transcripts. This is the core training material for tone and structure.
- 8 08-ejemplos-reales.md — the real conversation transcripts themselves, PII-redacted (see below), so the assistant can be trained on genuine phrasing rather than paraphrase.
- 9 faq-estructurado.csv — the same FAQ set as a structured table.

PII redaction — read before uploading anywhere external

The source transcript this revision is built from contained a client's full name, tax/billing details, and several real phone numbers. None of that appears in 08-ejemplos-reales.md or anywhere else in this stack — only the conversation pattern and the real message text were kept. If you regenerate this stack from a fresh transcript export, redact identifying details the same way before the file leaves this repo, especially before it's uploaded to any third-party training platform (a data processor outside this company).

Which formats to use where (background — the PDFs above are the actual deliverable)

Target platform	Upload this
Meta's native Business Agent — trains from linked website, FAQs list, and Commerce Catalog, not raw file upload	03-faq.md / pdf/03-faq.pdf content, plus keep the live site pages this doc summarizes accurate
Third-party WhatsApp Business API chatbot builders, or any tool requiring PDF	pdf/*.pdf, uploaded individually — one file = one topic, not concatenated
A platform asking for a "structured" source	faq-estructurado.csv / pdf/faq-estructurado.pdf

Regenerating the PDFs

After editing any .md/.csv source, re-run the conversion script rather than hand-editing a PDF:

```
python3 scripts/render_pdfs.py
```

(Script lives at docs/whatsapp-business-ai/scripts/render_pdfs.py — reportlab-based, no external binary dependency.)

Source of truth — this stack drifts if you don't watch it

Nothing here is auto-compiled the way Mister's own packs are (root CLAUDE.md §1.4 "one brain, many mouths" — Mister never forks, but a WhatsApp-native tool is a second, separate assistant with no access to Mister's live context). Re-derive it from:

- `apps/site/src/lib/mister/guardrails.ts` — Mister's own forbidden claims (stricter than this WhatsApp line's rules — see the correction above)
- `packages/liveries/registry.md` — lane codes and status
- `apps/site/src/lib/lanes/interioresMisterPack.ts` — Interiores/Azulejos facts
- `apps/site/src/lib/rb/misterPack.ts` — represented-brand facts
- `spec/vision.md` — company positioning and markets
- `apps/site/src/app/proceso/page.tsx` — the published import process
- A fresh, PII-redacted export of real WhatsApp transcripts — the single best source for tone and discovery-question ordering; re-derive 07/08 from it whenever the sales team's real patterns shift

Treat a stale WhatsApp AI knowledge base the same way the codebase treats a stale carton count: a wrong answer here reaches a buyer directly, with no guardrail scanning it first the way Mister's hold-back guardrail does.
